# Checking a small CSV import

Review the data before using it in a report or another system.

## By the end, you can

01 Check required fields, formats and duplicate IDs.

02 Reconcile ready and held rows with the source.

03 Record what needs confirmation before release.

**Work on a copy. Keep the original file unchanged.**

# Inspect the sample import

Sample rules: unique order_id; date as YYYY-MM-DD; amount_usd required, numeric and zero or greater.

| Source row | order_id | order_date | amount_usd |
|---|---|---|---|
| 2 | A101 | 2026-10-01 | 25.00 |
| 3 | A102 | 2026-10-01 | (blank) |
| 4 | A102 | 2026-10-02 | 18.00 |
| 5 | A104 | 2026-10-03 | 32.00 |

**Hold source rows 3 and 4: missing amount and duplicate ID.**
**Ask the data owner to resolve them. Do not guess or silently delete.**

# Reconcile and record a decision

| Source data rows | Ready rows | Held rows |
|---|---|---|
| 4 | 2 | 2 |

## 4 source rows = 2 ready rows + 2 held rows

**Record the issue**

Rows 3–4, A102: confirm the ID and missing amount with the data owner.

**Choose the next step**

Release A101 and A104 only if partial import is approved. Recheck any corrections before releasing held rows.

Practice: complete questions 1–5 on page 2 of the participant guide.
