PREPARED FOR SAM

Manual of Me

Make room for the week you actually have.

A few patterns from your answers, and one small experiment to explore.

Your answers. A few possibilities. One small experiment.

A fictional report for Sam

Sample content illustrates a design direction. It is not a real assessment, diagnosis or record of results.

A / YOUR WORDS

Your personal starting point

You want a routine that still fits when work gets busy. Your previous plan asked for three 45-minute evenings each week; late meetings often interrupted it. For now, you would prefer a short, familiar walk over starting another gym plan.

- What matters to you: a routine you can return to without waiting for a fresh week.

From your example answers: Q1, Q2, Q3, Q7

B / FROM YOUR ANSWERS

What your answers reveal

Three observations connect directly to what you described.

- Your evening plans compete with changing work hours. You described late meetings interrupting the time you had set aside.
- A missed session sometimes becomes a delayed restart. You said you often wait until Monday to begin again.
- Low-preparation movement already feels easier to begin. Your weekend walk needs little setup, and you would like to try something similarly simple.

From your example answers: Q2, Q3, Q4, Q5, Q7

C / A POSSIBILITY TO EXPLORE

Why previous attempts may have been difficult

Your plan depended on a clear 45-minute evening window, while your work could change at short notice. That mismatch may have made the plan difficult to repeat. Waiting until Monday after a missed session may also have extended the interruption. These are possible explanations from your answers. We have not established whether other factors also played a part.

From your example answers: Q2, Q3, Q4

D / A POSSIBILITY TO EXPLORE

Your potential blind spots

Could the size of the planned session be making it harder to return? You described both a 45-minute plan and a habit of restarting “properly.” It may be worth exploring whether a smaller version would still feel worthwhile to you.

- A morning window is a possibility, not yet a pattern. You identified two likely ten-minute openings. Trying one would tell us more than assuming it will fit.

From your example answers: Q2, Q4, Q6

E / A PROPOSED NEXT STEP

What could work better for you

Try planning two short, familiar walks in the morning windows you identified. Choose a backup window at the same time, so a disrupted day already has an alternative. Keep the question small: “Did this fit my real week?” A brief note about what helped or got in the way will be more useful for this experiment than a demanding tracking system.

From your example answers: Q3, Q5, Q6, Q7, Q8

F / A PROPOSED NEXT STEP

Your stepping stones

Start with three small actions. Adjust the plan from what you learn.

01 Choose two openings. Pick the two mornings you expect to have ten minutes, plus one backup window.

02 Make starting simple. Choose a familiar route and put what you need by the door.

03 Leave one honest note. After each planned attempt, write what happened-even if the walk did not happen.

From your example answers: Q5, Q6, Q7, Q8

G / A PROPOSED NEXT STEP

Your personal if-then rules

These are draft rules to try and refine, not statements about what you already do.

- If a late meeting removes my planned evening time, then I will look at my next agreed backup window.
- If I miss a planned walk, then I will note the obstacle and choose the next suitable opportunity instead of automatically waiting until Monday.
- If a morning window proves unrealistic, then I will change the timing before making the activity longer.

From your example answers: Q2, Q3, Q4, Q6, Q8

H / A PROPOSED NEXT STEP

Your seven-day experiment

One question: can two short, familiar walks fit around a changing work week? What counts as useful is an honest observation about whether the plan fits. This experiment does not promise a particular fitness result.

1. **Day 1 -**
   Choose. Select two likely ten-minute windows and one backup.

2. **Days 2-3 -**
   Try the first window. If it fits, take the familiar walk you chose. If it does not, note the obstacle and consider your backup.

3. **Day 4 -**
   Adjust one thing. Review your note. Keep or change the timing; do not add a more demanding plan.

4. **Days 5-6 -**
   Try the second window. Use what you learned from the first attempt.

5. **Day 7 -**
   Review. What did you try? What happened? What helped? What got in the way? What would you change next week?

From your example answers: Q5, Q6, Q7, Q8

I / STILL OPEN

Open questions

A useful report can leave questions open.

- Will the two morning windows remain available in a busy week? We have not tested that yet.
- Would a different backup time fit better than mornings?
- What would make a short session feel worthwhile enough to repeat?
- Are there other constraints you would want to discuss before choosing a routine?

From your example answers: Q3, Q4, Q6

J / A PROPOSED NEXT STEP

The next step with JZPT

You can try this experiment on your own. If you would like to explore what fits your life with someone, a Transformation Blueprint session can build on these observations and help shape a realistic next step.

Keep my manual

The following pages show every fictional answer behind this example. You can follow each Q reference back to its source. Possible interpretations remain possibilities; no scores or diagnostic categories have been assigned.

The words behind the report

Synthetic answers written only for this design example. No real personal records or client data are included.

Q1 / EXAMPLE ANSWER

What would you like to change?

I want a routine I can keep during busy weeks. I would like movement to feel like part of my week rather than another project to restart.

Q2 / EXAMPLE ANSWER

What has happened with previous plans?

I usually start with three 45-minute evening workouts. After two or three weeks, late meetings get in the way and I stop.

Q3 / EXAMPLE ANSWER

What tends to disrupt your plans?

My work hours change. A meeting can be added near the end of the day, so I cannot promise the same finish time.

Q4 / EXAMPLE ANSWER

What happens after you miss a session?

When I miss a session, I often decide I will start again properly on Monday.

The words behind the report

Synthetic answers written only for this design example. No real personal records or client data are included.

Q5 / EXAMPLE ANSWER

What already feels easier to begin?

I enjoy a relaxed weekend walk. It is easy to start because I do not need equipment or a perfect time slot.

Q6 / EXAMPLE ANSWER

Where might a smaller activity fit?

On two mornings next week, I can probably find ten minutes before work. I have not tried using that time for a walk yet.

Q7 / EXAMPLE ANSWER

What would you prefer to try first?

For now, I would rather try a short walk I already feel comfortable doing than commit to a new gym plan.

Q8 / EXAMPLE ANSWER

How would you prefer to reflect on the experiment?

A quick note about what got in the way would be easier for me to keep than tracking lots of numbers.
