THE VERSION-ONE TEST

Does this feature belong in version one?

Test it against the first thing a user needs to finish.

ONE USER. ONE FINISHED TASK.

01 **Choose**

02 **Reserve**

03 **Confirm**

STEP 01 / DEFINE THE OUTCOME

Write down the task.

For a booking product, the first flow might look like this:

1. **Choose a time**
   See what is actually available.
2. **Reserve it**
   Save the selected slot.
3. **Get confirmation**
   Know the booking is complete.

Now you have something specific to scope.

STEP 02 / REMOVE SOMETHING

Can the user still finish?

Try taking the feature out of the first release.

KEEP

Prevent double bookings

Two users should not reserve the same slot.

CAN WAIT

Referral rewards

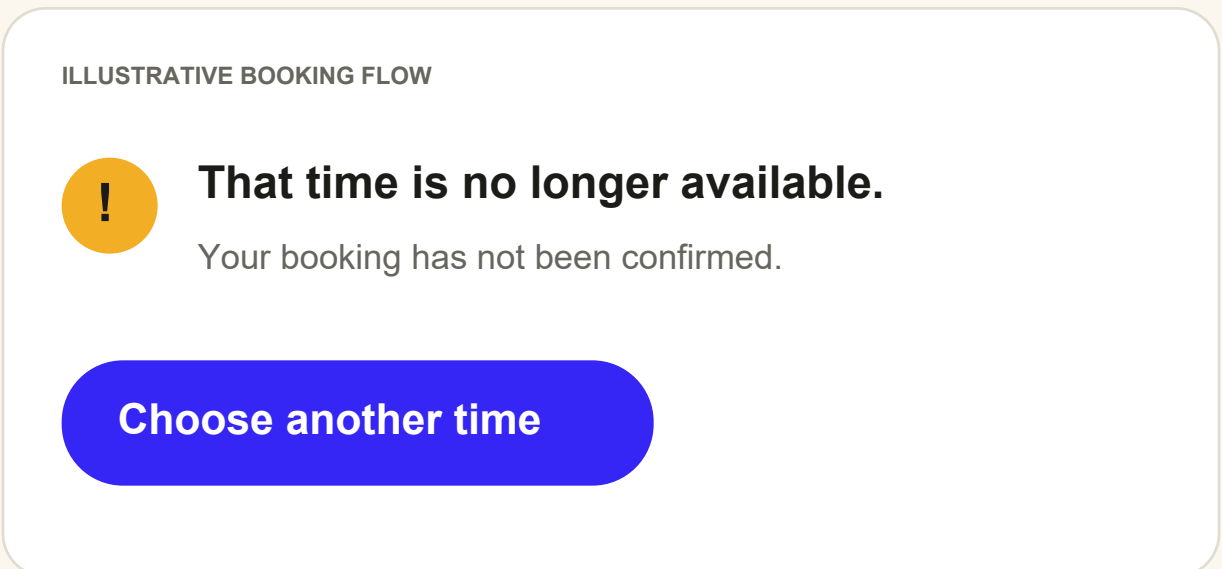

Useful later. Not essential to complete a booking.

STEP 03 / CHECK THE EXCEPTION

Walk through the awkward case.

The slot disappears before confirmation. What does the user see next?

Put this path in the clickable design first.

STEP 04 / MAKE THE CALL

Give each feature a reason.

Keep it when it enables the task or prevents a defined failure.

01 **Does it help the user finish?**

02 **Does it prevent a specific failure?**

03 **If neither, when should we revisit it?**

Bring that list to your scoping conversation.
